Exam

Answer one of the following questions in a typed essay. The essay must be 2.000 words (+/- 10%) and should demonstrate understanding of the readings given in the course. Where you use a reading be sure to reference it. Where you use a quote from a reading, reference this with the page number that the quote is drawn from.

When you have written the essay, save it as a .pdf and submit it via Canvas.

1. "Research ethics does not apply to research carried out on the internet, as the information is all open source." Is this true and if so why, or why not?

2. "AI will replace jobs that are dull, dirty and dangerous, and it will increase the number of jobs in the long run, so it can only be a good thing for employment." Do you agree?

3. The Free Software Movement argues that licenses are unethical. Are they correct? Why or why not?

4. Are there any good defences for black or grey hat hacking?

You may research the question online and refer to the course readings. However, the more time you spend doing this, the less time you will have to write the paper.

Good luck!
